Measurement
TTC

ENGINEERED TO
DUCATI SPECIFICATIONS

TTC is a special tool for checking the tension of engine cam belts, developed to Ducati's own specifications. TTC measures belt tension by means of a highly sensitive microphone that allows the belt's resonant frequency to be analysed. It requires no cables and is self-powered by rechargeable batteries (battery charger supplied). TTC does not need to be connected to any other tool as it displays results directly on its own screen. Compact and lightweight, TTC combines advanced technology with a uniquely convenient and practical design that lets you check and adjust cam belt tension accurately and professionally.
